Dear Customer,

ISOFlex Packaging produces milk jug bags under the guidelines in the STANDARDS FOR THE FABRICATION OF SINGLE SERVICE CONTAINERS AND CLOSURES FOR MILK AND MILK PRODUCTS, 1995 REVISION, Section 19 e.

Section 19 e states:

"All packaging materials that contact the product-contact surface of the container or closure shall comply with the requirements of Parts 175 through 178 of Title 21 of the Code of Federal Regulations³ and the bacteriological standards of Section "C" of this document, but the materials do not have to be manufactured at a listed single service plant."

This is to certify that all films and bags produced by ISOFlex Packaging for packaging single service containers and closures for milk and milk products are produced with resins that comply with the requirements of Parts 175 through 178 of Title 21 of the Code of Federal Regulations.

After manufacturing, bags and films are tested in a periodic and timely manner, by certified laboratories, for bacteria and coliform organisms. Recent tests of this type representing the routine testing are available for inspection. ISOFlex Packaging certifies that this testing has confirmed that these bags and film comply with the standards of section "C".

Should you need additional assistance, please call your local ISOFlex Packaging representative.
