This letter is in response to your request for information concerning the validation and absence of potential chemical migrations to the food from the food packaging materials you purchase from ISOFlex Packaging Corporation.

All of the food packaging products manufactured by ISOFlex Packaging are in full compliance with the Federal Food, Drug, and Cosmetic Act and all applicable food additive regulations. Since the raw materials (resins, additives, and processing aids) used to formulate these food packaging products are cleared for food contact applications by FDA regulation and meet the required extraction specifications, no additional migration testing is required.

As a part of this FDA clearance, raw material suppliers submit migration testing results to the FDA for evaluation and acceptance. Since the raw materials used were found to be acceptable, no additional migration testing is normally required.

It is important that all food contact substances be used under the approved conditions-of-use, this will ensure that the use of the material is safe for the intended application and in full compliance with the Federal Food, Drug, and Cosmetic Act and all applicable food additive regulations.

Sincerely,

Keith Van Hulle
Technical Director
ISOFlex Packaging Corp.
